- 7 Heating programmer**
With boost option

Getting started

Show my usage

You can view the energy consumed in your home over different time periods or even real-time usage.

Programmer

Incontro has a built-in programmer and thermostat, which allows you to control the heating system in your home.

You can schedule when you would like the heating to be turned on/off and can 'boost' the temperature when needed to ensure comfort.

You can also set different hot water times to suit your needs.

INCONTRO

Brought to you by

switch2

Control panel

Financial information

You can find information about your meters and your most recent meter readings, including a refresh option for most recent readings.

Device settings

Change the device settings, including:

- Edit volume
- Turn on/off the notification light and proximity sensor
- Change the background image
- Set night time temperature
- Set do not disturb times for notifications
- Your device information including serial number
- Restart button
